

## chaptre-12 simple interest Exercise-13.1

Solution - Q1 :-

(i) It is given that,

Principal (P) = Rs 2000.

Rate of interest (R) = 5% percent per annum.

Time = 5 years.

I = simple interest = ?

$$I = \frac{PRT}{100} = \frac{2000 \times 5\% \times 5 \text{ years}}{100}$$

$$= \frac{5000\%}{100} = \text{Rs. } 500$$

Simple interest is Rs. 500.

(ii) It is given that,

Principal (P) = Rs. 500.

Rate of interest = 12.5% per annum.

Time = 4 years. I = ?

$$I = \frac{PRT}{100} = \frac{500 \times 12.5 \times 4}{100} = \frac{500 \times 50}{100} = \text{Rs. } 250.$$

Simple interest = Rs. 250.

(iii) It is given that,

Principal (P) = Rs 4500. Rate of interest = 4% per annum.

Time = 6 months.

Time =  $\frac{6}{12}$  years =  $\frac{1}{2}$  years [As 1 year = 12 months]

$$I = \frac{PRT}{100} = \frac{4500 \times \frac{1}{2} \times 4}{100} = \text{Rs. } 90. \quad \therefore I = 90.$$

(iv) Principal = Rs. 12000

Rate of interest = 18% per annum.

Time = 4 months. =  $\frac{4}{12}$  year. [ $\because 1 \text{ year} = 12 \text{ months}$ ]

We know that,

$$I = \frac{PRT}{100} = \frac{12,000 \times 18 \times 4/12}{100}$$

$$I = \frac{12,000 \times 1/2}{12}$$

$$I = \text{Rs. } 720.$$

(v) Principal = Rs. 1000.

Rate of interest = 10% per annum

and Time = 73 days.

We know that. [1 year = 365 days.]

$$\text{Time} = \frac{73 \times 1}{365} \quad \text{day} = \frac{1}{365} \text{ year}$$

$$\text{Time} = \frac{1}{5} \text{ year.}$$

$$I = \frac{PRT}{100}$$

$$= \frac{1000 \times 10 \times \frac{1}{5}}{100}$$

$$= \frac{100 \times 1}{5}$$

$$= \text{Rs. } 20.$$

Simple interest = Rs. 20.

Solution-02:-

It is given that,

Principal (P) = Rs. 500.

Time (T) = 4 years.

Rate of interest = 8% per annum.

Interest = ?

$$I = \frac{PRT}{100}$$

$$= \frac{500 \times 4 \times 8}{100}$$

$$I = \text{Rs. } 160$$

Amount = principal + interest

$$= \text{Rs. } 500 + \text{Rs. } 160$$

$$= \text{Rs. } 660.$$

Solution-03:-

It is Given that,

Principal (P) = 400.

Rate of interest (R) = 5% per annum.

Time (T) = 2 years.

$$I = \frac{PRT}{100}$$

$$\text{Interest} = \frac{400 \times 5 \times 2}{100}$$

$$= \text{Rs. } 40.$$

$$\text{Interest} = \text{Rs. } 40.$$

Solution-04:-

$$\text{Principal (P)} = \text{Rs } 400.$$

$$\text{Rate of interest (R)} = 5\%.$$

Time = 3 years.

Interest = ?.

$$I = \frac{PRT}{100} = \frac{400 \times 5 \times 3}{100}$$

$$= \text{Rs. } 72.$$

Simple interest = Rs. 72.

Solution-05:-

$$\text{Principal (P)} = \text{Rs } 25,000.$$

$$\text{Rate of interest (R)} = 20\% \text{ percent per annum.}$$

Time = 1 year. [∴ per annum = 1 year]

Simple interest per annum = ?, for every one year.

$$I = \frac{PRT}{100}$$

$$= \frac{25000 \times 20 \times 1}{100}$$

$$= \text{Rs. } 5,000$$

Simple interest = Rs. 5,000 per year.

Solution-06:-

It is given that,

$$\text{Principal (P)} = \text{Rs } 8,000.$$

$$\text{Rate of interest (R)} = 8\%.$$

$$\text{Time period} = 4\frac{1}{2} \text{ years.} = \frac{9}{2} \text{ years.}$$

We know that,

Amount has to pay = Principal + Interest.

$$\text{Interest} = \frac{PRT}{100}$$

$$= \frac{8000 \times 8 \times \frac{9}{2}}{100}$$

$$= 36 \times 80$$

$$= \text{Rs } 2880$$

∴ Interest = Rs. 2880.

∴ Amount has to pay = 8,000 + 2,880 = Rs. 10,880.

Solution-07:- Rakesh lent out

→ Principal = Rs. 8,000, Time = 5 years and Rate of interest = 15%

$$\text{Interest} = \frac{PRT}{100} = \frac{8,000 \times 5 \times 15}{100} = \frac{400 \times 15}{100} = 6,000.$$

Rakesh Borrowed.

Principal Rs. = 6,000. Time = 3 years, Rate of interest = 12%

$$\text{Interest} = \frac{PRT}{100} = \frac{6,000 \times 3 \times 12}{100} = \frac{180 \times 12}{100} = \text{Rs } 216$$

Rakesh Gained money.

$$\text{i.e.} = \text{Rakesh lent out interest} - \text{Rakesh Borrowed interest}$$

$$= 6,000 - 216 = \text{Rs } 3840.$$

∴ Gain = Rs. 3840. [∴ (lent > Borrow)]

Solution - 8 :-

Anitha deposited Principal (P) = RS 1000.

Time = 1 year.

Rate of interest (R) = 5%.

Interest = ?.

Amount = ?.

$$\text{Interest} = \frac{PRT}{100} = \frac{1000 \times 5 \times 1}{100} = \text{RS. } 50$$

Amount = Anitha deposited money + interest.

$$= \text{RS. } 1000 + \text{RS. } 50$$

$$= \text{RS. } 1050.$$

∴ Money RS 1050 Anita get after one year.

Solution - 09 :-

Nalini borrowed = Principal = RS. 550.

Rate of interest = 8%.

Time = 6 months. [Number of years =  $\frac{\text{No. of months}}{12}$ ]

$$\text{Time} = \frac{6}{12} \text{ year} = \frac{1}{2} \text{ year}$$

$$\text{Interest} = \frac{PRT}{100} = \frac{550 \times 8 \times \frac{1}{2}}{100} = \frac{55 \times 8}{20} = \text{RS. } 22$$

Amount = Principal + interest

$$= \text{RS. } 550 + \text{RS. } 22 = \text{RS. } 572.$$

∴ she has to pay after 6 months is RS 572.

Solution - 10 :-

Rohith Borrowed money (P) = RS 60,000.

Rate of interest (R) = 10% q/y. Per annum

Time = 2 years.

Simple interest = ?.

$$\begin{aligned} I &= \frac{PRT}{100} \\ &= \frac{60,000 \times 10 \times 2}{100} \\ &= 12,000. \end{aligned}$$

Interest = RS 10,800.

Rohith Lent principal (P) = RS 60,000.

Rate of interest (R) = 10% per annum.

Time = 2 years.

Simple interest = ?.

$$\begin{aligned} I &= \frac{PRT}{100} = \frac{60,000 \times 10 \times 2}{100} \\ &= 12,000. \end{aligned}$$

Rohith earned amount = Rohith b6y6000 / lent interest -

Rohith borrowed interest

$$= 12,000 - 10,800$$

$$= \text{RS. } 1200.$$

∴ Rohith earn from this transaction is RS. 1200.

SOLUTION - 11 :-

Romesh Borrowed.

Principal = Rs 2,000.

Rate of interest = 2%.

Time period = 2 years.

$$\text{Interest for Rs 2,000} = \frac{PRT}{100} = \frac{2000 \times 2 \times 2}{100}$$

$$= \text{Rs } 80$$

Principal (P) = 1,000

Rate of interest (R) = 5%.

Time period = 2 years.

$$\text{Interest for Rs 1000} = \frac{PRT}{100} = \frac{1000 \times 5 \times 2}{100}$$

$$= \frac{10000}{100}$$

$$= \text{Rs } 100$$

$$\begin{aligned}\text{Interest has to pay} &= \text{Interest for Rs 2,000} + \\ &\quad \text{interest for Rs 1,000} \\ &= \text{Rs } 80 + \text{Rs } 100 = \text{Rs } 180.\end{aligned}$$

$$\begin{aligned}\text{Amount} &= \text{Romesh Borrowed principal} + \text{Interest has to pay} \\ &= 2000 + 1000 + 100 + 80 = \text{Rs } 3180\end{aligned}$$

Romesh Paid money = 2800.

$$\begin{aligned}\text{It is given that, Amount} &= \text{Romesh Paid} + \text{watch amount} \\ \text{watch amount} &= 3180 - 2800 = \text{Rs } 380\end{aligned}$$

Solution - 12 :-

It is given that,

Mrs. Goetz Lent amount = Rs 15,000.

$$\begin{aligned}\text{Rest Money} &= 15,000 - 12,500 \\ &= 2,500.\end{aligned}$$

Time period = 3 years.

Interest on Rs 12,500:-

Principal (P) = 12,500.

Time period (T) = 3 years.

Rate of interest = 15%.

$$\begin{aligned}\text{Interest} &= \frac{PRT}{100} = \frac{12,500 \times 3 \times 15}{100} \\ &= 375 \times 15 \\ &= \text{Rs } 5,625.\end{aligned}$$

Interest on Rs 2,500:-

Principal (P) = 2,500.

Time period (T) = 3 years.

Rate of interest = 18%.

$$\begin{aligned}\text{Interest} &= \frac{PRT}{100} = \frac{2,500 \times 3 \times 18}{100} \\ &= 75 \times 18 \\ &= \text{Rs } 1350.\end{aligned}$$

Total interest has to pay for Rs 15,000

$$= \text{interest for Rs } 12,500 + \text{interest for Rs } 2,500$$

$$= \text{Rs } 5,625 + \text{Rs } 1350 = \text{Rs } 6975.$$

Interest he earned is Rs 6975

Solution -13 :-

Shikha deposited amount = RS 2000. = principal (P)  
Rate of interest = 6 %.

$$\begin{aligned}\text{Interest for one year on RS 2000} &= \frac{PRT}{100} \\ &= \frac{PR}{100} \quad [\text{Time} = 1 \text{ year}] \\ &= \frac{2000 \times 6}{100} \\ &= \text{RS. } 120.\end{aligned}$$

She withdrew RS 700 at year Means.

$$\begin{aligned}\text{Shikha deposited amount in Bank} &= \text{RS } 2,000 - \text{RS } 700 \\ &= \text{RS } 1300\end{aligned}$$

$$\begin{aligned}\text{Interest for RS } 1300 &= \frac{1300 \times 6 \times 2}{100} \quad [T = 2 \text{ years } \frac{1}{2}] \\ &= \text{RS. } 156.\end{aligned}$$

Shikha Balance After 3 years = 1300 +

$$\begin{aligned}&\text{Interest for one year on RS 2,000} \\ &\text{Interest on amount } 1300 \text{ for 2 years} \\ &= 1300 + 120 + 156 \\ &= \text{RS } 1,676.\end{aligned}$$

∴ Shikha Balance after 3 years is RS 1,676.

Solution -14:-

Here, Principal (P) = Loan = 8000

Rate of interest (R) = 15 %

Time period = 2 years

Interest = ?

$$\begin{aligned}I &= \frac{PRT}{100} \\ &= \frac{8000 \times 15 \times 2}{100} \\ &= 160 \times 15 \\ &= \text{RS. } 2,880.\end{aligned}$$

Total amount Reema has to pay = Principal + interest

$$= \text{RS } 8000 + \text{RS } 2,880$$

$$= \text{RS. } 10,880.$$

Reema Paid Total amount = 10,400 + wrist watch

∴ Wrist watch cost = Total amount - 10,400

$$= 10,880 - 10,400$$

$$= 480$$

$$= \text{RS. } 480$$

∴ Wrist watch cost = RS. 480.

solution - 15 :-

Here, principal (P) = RS 20,000.

Rate of interest (R) = 10%.

Time period per annum.

Interest = ?

$$\text{Interest} = \frac{PRT}{100}$$
$$= \frac{20,000 \times 10 \times 1}{100}$$
$$= \text{RS. } 2,000$$

$$\text{income tax on interest earned} = \frac{2,000 \times 3\%}{100}$$
$$= \text{RS. } 60$$

income tax on interest earned = RS 600.

= RS 600.

his annual income = Interest - income tax.

$$= 2,000 - 600$$
$$= \text{RS } 1400.$$
