Answer

Given: Let X denote the number of times 'a total of 9' appears in two throws of a pair of dice

To find : probability distribution of X ,mean (u) and variance (σ^2) and standard deviation

20% of the bulbs produced by a machine are defective. Find the probability distribution of the number of defective bulbs in a sample of 4 bulbs chosen at random. [CBSE 2004C]

Answer

Given: 20% of the bulbs produced by a machine are defective.

To find probability distribution of a number of defective bulbs in a sample of 4 bulbs chosen at random.

Formula used:

The probability distribution table is given by ,

x ₁	x ₂	x ₃	x ₄	x ₅
(1)	(2)	(3)	(4)	(₅)

Where
$$P(x) = {}^{n}C_{x}p^{x}q^{n-x}$$

Here p is the probability of getting a defective bulb.

$$q = 1 - p$$

Let the total number of bulbs produced by a machine be x

20% of the bulbs produced by a machine are defective.

Number of defective bulbs produced by a machine = $\frac{20}{100} \times (x) = \frac{x}{5}$

X denotes the number of defective bulbs in a sample of 4 bulbs chosen at random.

Let p be the probability of getting a defective bulb,

$$p = \frac{\frac{x}{5}}{x} = \frac{1}{5}$$

$$p = \frac{1}{5}$$

$$q = 1 - p = 1 - \frac{1}{5} = \frac{4}{5}$$

$$q = \frac{4}{5}$$

since 4 bulbs are chosen at random, n=4

X can take the values of 0,1,2,3,4

$$P(x) = {}^{n}C_{x}p^{x}q^{n-x}$$

$$P(0) = {}^{4}C_{0}(\frac{1}{5})^{0}(\frac{4}{5})^{4} = \frac{256}{625}$$

$$P(1) = {}^{4}C_{1}(\frac{1}{5})^{1}(\frac{4}{5})^{3} = \frac{256}{625}$$

$$P(2) = {}^{4}C_{2}(\frac{1}{5})^{2}(\frac{4}{5})^{2} = \frac{96}{625}$$

$$P(3) = {}^{4}C_{3}(\frac{1}{5})^{3}(\frac{4}{5})^{1} = \frac{16}{625}$$

$$P(4) = {}^{4}C_{4}(\frac{1}{2})^{4}(\frac{4}{5})^{0} = \frac{1}{625}$$

The probability distribution table is as follows,

	0	1	2	3	4
		256 625	96 625	16 625	1 625
