Step 1: Draw a circle with center $O$ and radius 4 cm
Step 2: Draw radius OA and produce it to B.
Step 3: Make $\angle A O P=30^{\circ}$
Step 4: Draw $P Q \perp O P$, meeting $O B$ at $Q$.
Step 5: Then, $P Q$ is the desired tangent, such that $\angle O Q P=60^{\circ}$

20. Draw two concentric circles of radii 4 cm and 6 cm . Construct a tangent to the smaller circle from a point on the larger circle. Measure the length of this tangent.
Sol:
Step of Construction:
Step 1: Draw a circle with $O$ as center and radius 6 cm
Step 2: Draw another circle with $O$ as center and radius 4 cm
Step2: Mark a point $P$ on the circle with radius 6 cm
Step 3: Join $O P$ and bisect it at $M$.
Step 4: Draw a circle with $M$ as center and radius equal to $M P$ to intersect the given circle with radius 4 cm at points T and T .
Step5: Join PT and PT’.

Thus, PT or PT' the required tangents and measure 4.4 cm each.
